

Dear JPMorgan Chase Hiring Team,

I am excited to apply for the 2026 Emerging Talent Software Engineer program at JPMorgan Chase. I am eager to contribute to a mission-driven, globally connected technology organization that builds reliable, secure, and impactful software for millions of people. This program's emphasis on collaboration, continuous learning, and real-world impact aligns closely with my career goals and experiences as an early-career software engineer.

I come to software engineering through a non-traditional path, having completed a Frontend Software Engineering certificate through Frontend Simplified after earning degrees in Communication Studies and Education. During this transition, I developed strong technical foundations in JavaScript, TypeScript, React, and modern web development practices while also strengthening my ability to communicate clearly, collaborate across teams, and approach problems with empathy and structure.

Through hands-on projects, I have built production-style applications that integrate external APIs, manage application state, and handle real-world edge cases. For example, I helped build Skinstric, an AI-powered web application that guides users through image analysis with reliable navigation, structured UI flows, and clear visual feedback. I also created a membership-based book summary platform using Next.js, Firebase, Stripe, and Redux, which required careful handling of authentication, secure routing, and tiered access control. These experiences taught me how to balance speed with stability, write maintainable code, and think critically about system design and user experience—skills I know are essential at JPMorgan Chase.

I am particularly drawn to the Emerging Talent program's focus on mentorship, cross-team collaboration, and building solutions that create positive social impact. I am excited by the opportunity to work alongside experienced engineers, learn from large-scale systems, and contribute to initiatives like the Force for Good program. I am motivated by environments where technical excellence meets meaningful outcomes, and I believe JPMorgan Chase provides the ideal setting for that growth.

Thank you for considering my application. I would welcome the opportunity to discuss how my background, skills, and enthusiasm for technology could contribute to your team. I look forward to the possibility of joining JPMorgan Chase and growing as part of your global engineering community.

Sincerely, Kevin Riley
